
TB ANYWHERE IS EVERYWHERE

INVEST * RESEARCH * ACT

The theme

Whilst TB exists anywhere in the world, there is a collective responsibility that touches everyone, everywhere, to combat this curable disease. The theme: **TB anywhere is TB everywhere**, reinforces this message of the need for collaboration, and also highlights the fact that TB can spread easily due to the way in which it is transmitted.

TB is preventable and curable. FUND THE GLOBAL PLAN TO STOP TB.

WORLD TB DAY 2007

The image

The dandelion is a plant which propagates itself by airborne means. In the same way, social action can spread and take root, carried on the winds of our efforts and the global determination to overcome this disease.

The image also represents the vulnerability of a world where the disease, located anywhere, can spread everywhere.
