#### Description of Round 4 Activities

***Service delivery 3.3: TB stigma reduced and treatment seeking behavior increased among urban and rural population by means of health education and promotion activities.***

The stigma attached to TB will be reduced and the treatment seeking behaviors increased among urban and rural population by means of a communication for behavior change campaign.

#### **Activity 3.3.3: Community mobilization.**

The modalities of community mobilization will be identified in the COMBI plan of action among the different interventions: participatory research, community group meetings, partnership meetings, traditional media, community drama, home visits, articles on most popular papers, health education sessions to patients in health facilities, posters in places of social aggregation (churches, markets, schools), use of traditional leaders (mullah, elderly, teachers), advocacy events during World TB Day (marches, football matches, speeches of prominent local figures, lectures in schools), launch of postal stamps and gadgets.
