PEDIATRIC NEWER DRUGS STUDY (PND STUDY)

DR. SANGEETA SHARMA

MD, MNAMS, FNCCP(I)

CONSULTANT & IN CHARGE,

NATIONAL CENTRE OF EXCELLENCE FOR PEDIATRIC TB

FORMER DIRECTOR,

NATIONAL INSTITUTE OF TUBERCULOSIS AND RESPIRATORY DISEASES,

New Delhi

DETAILS OF THE RESEARCH PROJECT

Pediatric Newer Drugs Study: PND Study

Safety and Tolerability of Bedaquiline and Delamanid along with Optimized Background regimen for treatment of Paediatric DRTB (RR/ MDR/ Pre-XDR/XDR TB) in children aged 6-18 Years

- **Trial No.:** CTRI/2022/05/042659
- **Design**: Open Label, 3 arm, Single center, Randomized controlled adaptive trial.
- ✤ Funded: Indian Council of Medical Research (ICMR), New Delhi
- **Trial site:** National Centre of Excellence for Pediatric TB and DRTB,
- National Institute of Tuberculosis and Respiratory Diseases, New Delhi.
- Sample Size: 219 (73 subjects/arm)
- Status: Ongoing

Methods

Study primary endpoints:

Interim outcome (culture conversion, clinicoradiological)
Final outcome (cure, treatment completed, treatment failure, LTFU, death)

Study secondary endpoints:

• Safety (number of AE, $SAE \ge 3$) and Tolerability

Ethics:

• Ethical Committee, NITRD, New Delhi

Study Funded by

• Indian Council of Medical Research (ICMR), New Delhi.

Study Supported by

• Central TB Division, Ministry of Health & Family Welfare, Govt. of India

Study Monitored by

• External Drug Safety Monitoring Board (DSMB)

OBJECTIVES

PRIMARY OBJECTIVE

- To evaluate the **safety** and **tolerability** of newer drugs, BDQ and DLM.
- To compare the efficacy of Shorter (6-9 month) combined BDQ + DLM alongwith Optimized Background regimen (OBR) *with* Longer (18-20 month) regimen of BDQ / DLM alongwith OBR in paediatric (6-18 Year old) confirmed or probable DR TB patients (RR/ MDR/ Pre XDR/ XDR).

SECONDARY OBJECTIVE

- To compare treatment outcomes (interim and final) of 3 Arms.
- To evaluate adherence and palatability of child friendly drug formulations (CFD).
- To **compare the relapse rate** at the end of 6th and 12th month post treatment follow-up period for all cohorts (preferably also in subjects who prematurely discontinue from study trial).
- Evaluate development of resistance to drugs used in the regimens.
- Feasibility of adopting these All oral injection free regimens for pediatric DRTB patients under programmatic conditions.

ELIGIBILITY CRITERIA

- Confirmed (RR/ MDR/ Pre XDR/ XDR TB), Probable DRTB
- 6-18 years
- PTB &/- EPTB all sites including CNS TB, Miliary TB, OA
- Non Severe/ Severe disease
- HIV +/-
- Comorbidities +/-
- Consenting Guardian
- Place of residence Delhi/NCR

TREATMENT REGIMENS

PAS, Ethambutol, Meropenem)

Drug dosages given mg/kg weight band WHO recommendation 2022 (Module – 5) Design Adaptation: Group C drugs added based on DST/ intolerance/ failure of regimen

Detecting and assessing ADE side effects of drugs and prevention of these episodes

Repeated patient/care giver counseling sessions by project staff educating them regarding early recognition of common symptoms, early reporting of ADE has lead to a noticeable difference eg. any kind of leg pain , staff is informed telephonically and appropriate action initiated as per grade of ADE.

n= 143 episodes observed in 50 patients

N = 84 SAE observed; among 45 subjects

- Commonest Grade 1 &2 was Cutaneous followed by Gastritis.
- Commonest Grade 3 were Peripheral Neuropathy
- Myelosuppression requiring treatment interruption uncommon as all arms were started after building up Hb> 10gm% : occurred in 6 children only.
- Seizures Grade 4(4 GTCS, I focal) occurred in 05 children (Arm I = 3 & Arm II = 2) : stabilized on Levetriacetam. except 1 patient ArmI who died.
- * Others included body aches, fatigue, malaise, generalized weakness

SERIOUS ADVERSE EVENTS (GRADE ≥ 3)

N = 84 SAE observed; among 45 subjects

ACCEPTABILITY

	Arm-I	Arm-II	Arm-III	Total N(%)
Bitter taste/spitting out	17	11	9	37(21)
Bulky quantity	17	12	11	40(22)
GI issues (vomiting, fullness, gastritis)	6	4	7	17(10)
Refusal to take medicines	0	1	0	1(0.5)

Most frequent challenges reported by caregivers were

- bulk of medicine(22%),
- bitter taste of tablet esp. with FQ (21`%),
- vomiting or spitting out of medicines (10%),
- Refusal to take medicines (0.5%) of Arm II despite counselling

CONCLUSION

- Preliminary results show that Longer Oral BDQ regimen appears to be effective, safe with good acceptability and retention followed by Shorter Combined BDQ + DLM based regimen.
- SAT or f-DOT is feasible, with strong therapeutic counselling and support, improved retention in care.

Strength:

- RCT
- Reasonable sample size with 3 comparative arms

Limitation:

- Ongoing study
- Final results awaited.
- Problem of patient retention for post treatment follow-up

Challenges faced:

Treatment monitoring Intermittent stock out of child friendly formulations
