

The roadmap – one year later.....

Malgosia Grzemska &
Anne Detjen

10 steps to zero deaths

Include the needs of children in research, policy development, clinical practice

- Child TB to be included in GF applications concept notes (NFM)
- Child TB increasingly part of TB Programme reviews (9 reviews in 2013/2014)
- Post 2015 Strategy: intensify TB case finding, to better integrate TB care into other health care services and to better collaborate with community-based organisations and programmes
- STAG TB aims to explicitly highlight child TB at 2015 meeting

Policy-practice gap still exists

Foster local leadership

- Regional meetings WPRO (Viet Nam March 2014)
- Global consultation for high burden countries from Asia (SEAR, EMR, WPR)
 - Task forces, working groups, focal points, National scale up plans
- Collect and report better data
 - New estimates

Collect and report better data

- Revised global estimates (incl. MDR)
 - Jenkins et al
 - Dodd et al
- Estimates adolescent TB
- Country assessments (TB Alliance): Nigeria, Pakistan, Indonesia
- Focus on women in 2013 Global TB report

Develop training and reference materials

- 2014 WHO child TB guidance, 2nd edition
- WHO/Union training toolkit
- Union/WHO e-learning course

Engage key stakeholders

- **WHO/UNICEF:** adapted modules for CHWs to be piloted (Zambia, Malawi)
- **CORE group** spring meeting: Session on child TB
- **Save the children**
 - Child TB presented at strategic meeting in Nepal (Khurshid)
 - Included child TB into their official agenda: increase referral and detection of child TB through existing platforms (OVCs, nutrition, HIV, PMTCT)
- Union working group on **maternal and infant TB**
- **Publications:**
 - Lancet Viewpoint: Child Survival and child TB (Graham 2014)
 - CORE group/Union: Framework for integrating child TB into community-based child health care

Form coalitions and partnerships to improve tools Address research gaps

- Research update
- NIH meeting on diagnostic Biomarkers for pediatric TB (May 2014)

Still more work

- Implementation on the ground
 - Encouraging examples: VietNam – national scale-up of contact screening and IPT
- What is needed:
 - **Develop integrated, family-centered and community-centered strategies**
 - Operational research, data to convince maternal/child health community of the importance of childhood TB
 - Models for successful scale-up and decentralization of childhood TB activities at country/regional level
 - Best practices for implementation of contact screening/IPT (who, how)
- Opportunities:
 - Global Fund applications
 - Challenge TB
