# Decreasing TB mortality by integrating Maternal and Child Health

Robert Gie

Desmond Tutu Tuberculosis Centre and the Department of Paediatrics and Child Health, Stellenbosch University.

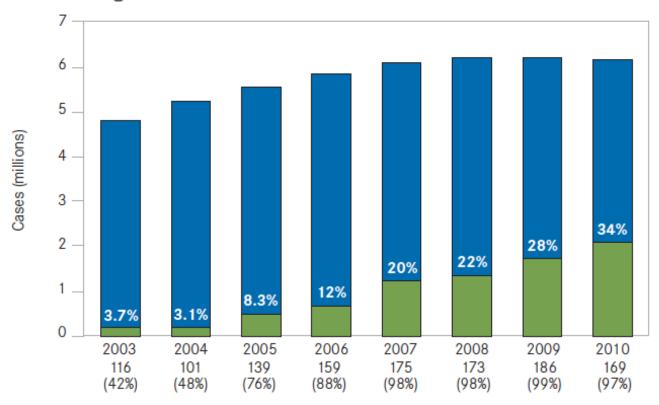

#### FIGURE 6.1

#### HIV testing for TB patients, all countries, 2003–2010

The number of notified new and retreatment cases is shown in blue and the number of cases for which the HIV status was recorded in the TB register is shown in green. The percentage of notified TB cases with known HIV status is indicated above the green bars.<sup>a</sup>

#### FIGURE 6.3

## Co-trimoxazole preventive therapy (CPT) and antiretroviral therapy (ART) for HIV-positive TB patients, 2003–2010

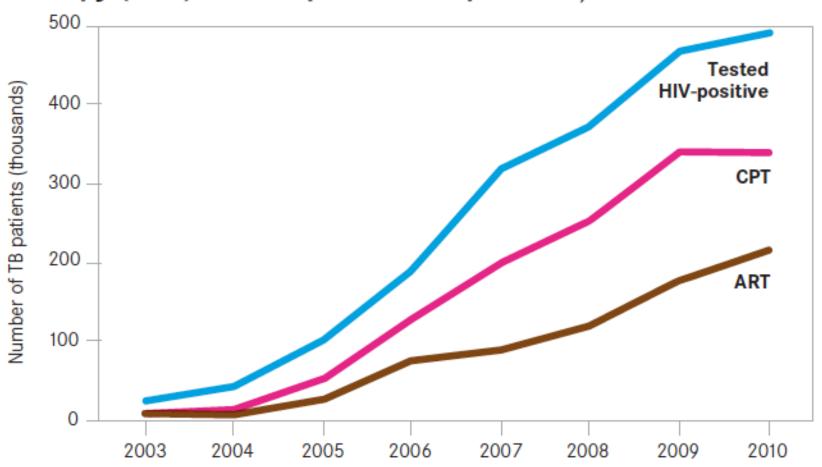

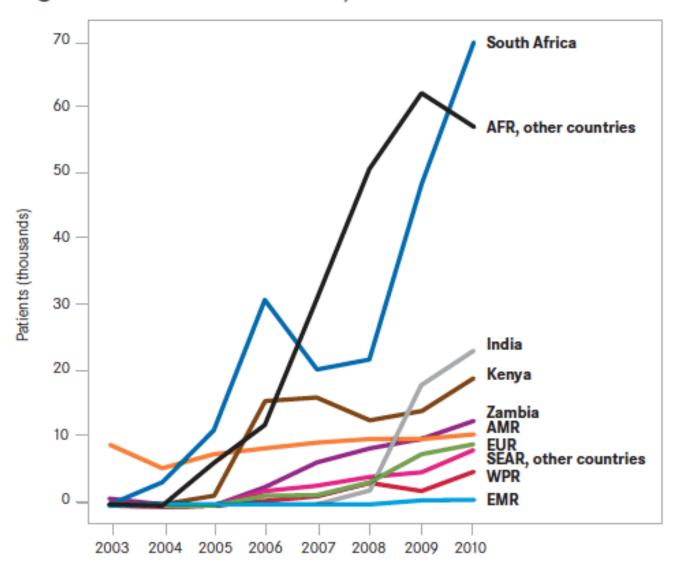

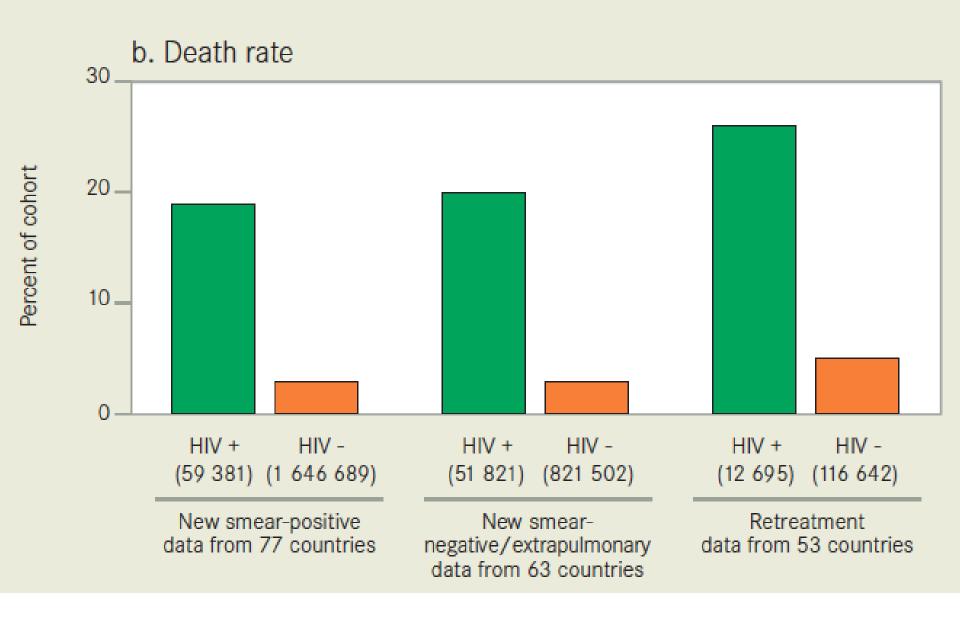

FIGURE 6.5

Antiretroviral therapy for HIV-positive TB patients by WHO region and selected countries, 2003–2010

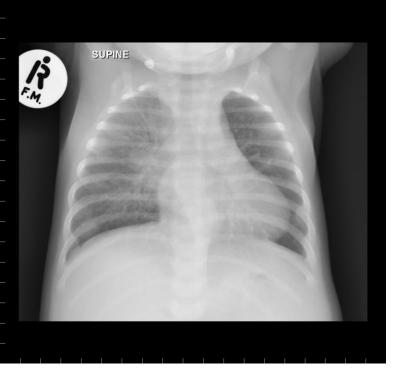

3 week old baby girl being ventilated for very severe pneumonia

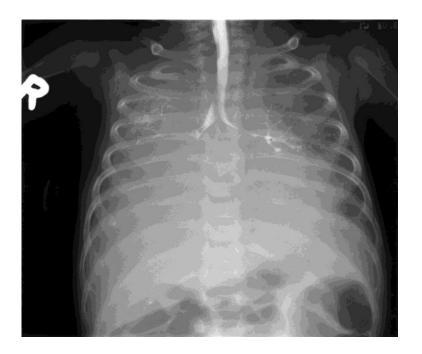

5 week old infant admitted severe airway obstruction not responding to beta 2 agonists

5 week old infant admitted with severe cavitating pneumonia

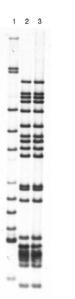

Figure 3. Comparative restriction fragment length (RFLP) fingerprints of the sentinel case and the source case, providing evidence of nosocomial transmission. Lane 1: reference strain; lane 2: source case; lane 3: sentinel case.

The 6 week old index case

The source case

And her infant child

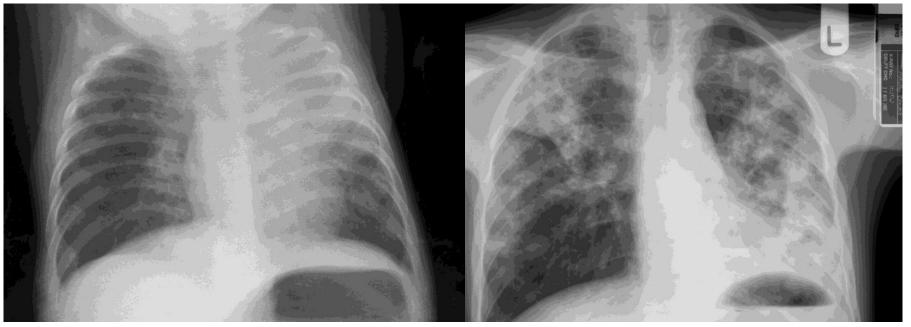

Table I. Duration of exposure, tuberculosis (TB) diagnosis and outcome in all infants exposed to an infectious tuberculosis source case in a kangaroo mother care (KMC) unit.

Patient number	Exposure duration	TB diagnosis	Time since KMC exposure	TB disease manifestation <sup>a</sup>	Outcome
1	>15 d	TB (baby of source case)	2 mo	Complicated lymph node disease with expansile TB pneumonia	Good
2	15 d	TB	5 mo	Uncomplicated lymph node disease	Good
3	12 d	No TB			
4	10 d	TB (sentinel case)	3 mo	Complicated lymph node disease with airway compression	Good
5	10 d (twin no. 1)	ТВ	4 mo	Complicated lymph node disease with airway compression	Good
6	10 d (twin no. 2)	No TB			
7	5 d	Not found			
8	4 d	no TB	Mother diagnosed with TB <1 y		
9	2 d	no TB			
10	<1 d	Not found			
11	<1 d	Not found			

Are we doing enough for the pregnant mothers and their babies to prevent, diagnose and

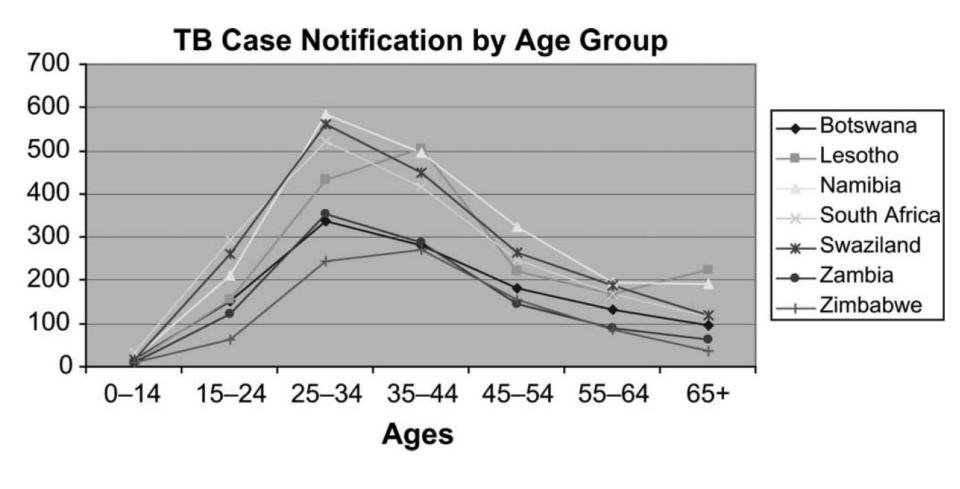

treat their TB?

## Exposure to TB in infancy;

 77 of 766 (10.1% CI 8.0-12.4%) of HIV exposed infants screened before 3 months of age had a TB contact

INT J TUBERC LUNG DIS 12(2):225-227 © 2008 The Union

# Age specific risk for disease after recent primary infection

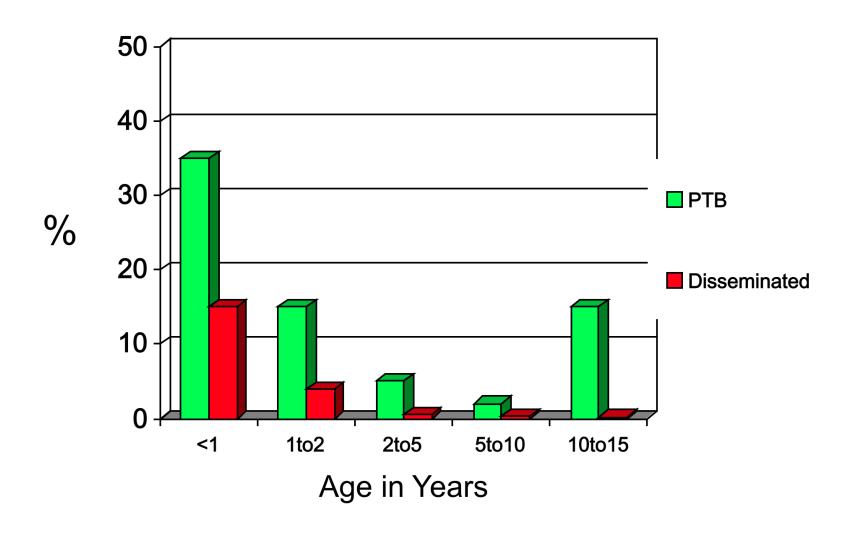

Table 2. Estimated incidence of culture-confirmed tuberculosis (TB) among HIV-infected and HIV-uninfected infants.

	No. of TB c				
Indicator	All infants	HIV-uninfected infants	HIV-infected infant	Relative risk (95% CI)	
Tuberculosis incidence	83.1 (73-94)	65.9 (57–75)	1596 (115-2132)	24.2 (17-34)	
Pulmonary tuberculosis incidence	78.7 (69-89)	62.5 (53-72)	1505.6 (1075-2023)	24.1 (17-34)	
Extrapulmonary tuberculosis incidence	28.2 (22-34)	22.9 (18-29)	481.8 (257-751)	21.0 (11-35)	
Disseminated tuberculosis incidence <sup>a</sup>	16.6 (12-21)	14.1 (10-18)	240.9 (87-432)	17.1 (6-34)	
Miliary tuberculosis incidence	10.9 (7-15)	9.3 (6-13)	150.6 (31-301)	16.2 (3-37)	
Tuberculosis meningitis incidence	9.2 (6-13)	7.9 (5-11)	120.1 (28-258)	15.2 (3-39)	

<sup>&</sup>lt;sup>a</sup> Disseminated tuberculosis was defined as miliary tuberculosis, tuberculosis meningitis, or disseminated disease, diagnosed on the basis of positive culture results of isolates from blood culture and/or bone marrow.

**Table 1** Clinical characteristics at tuberculosis diagnosi outcome in HIV-infected infants with culture-confirmed tuberculosis (n = 52)

, ,	
	n (%)
Characteristics at TB diagnosis	
Male sex	28 (53.8)
Age, months, median [range]	6 [1–12]
Reported household TB contact	27 (51.9)
CD4%, median [range]	16.5 [1.6–45]
WHO Stage 3	29 (55.8)
WHO Stage 4	19 (36.5)
Unknown HIV stage*	4 (7.7)
PTB only	37 (71.1)
EPTB only <sup>†</sup>	2 (3.9)
PTB+EPTB+ Disseminated TB (any)	7 (13.5) 6 (11.5)
-	0 (11.3)
Outcome Alive	27 (51.9)
Lost to follow-up	8 (15.4)
Died	17 (32.7) 👍
Attributed cause of death $(n = 17)$	
PTB	2 (11.8)
Pneumonia ± septicaemia§	7 (41.2)
PTB + pneumonia or septicaemia	2 (11.8)

Unknown cause of death	5 (29.4)

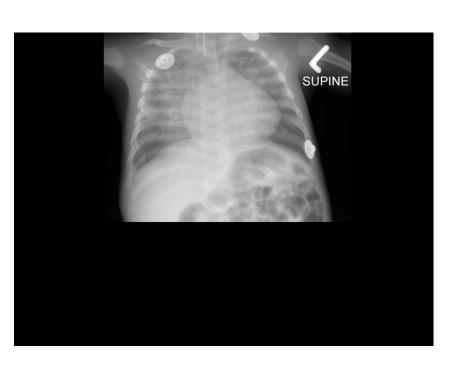

### INT J TUBERC LUNG DIS 15(6):770-775

**Table 5** Mortality among exposed children according to proximity to and health status of the adult TB case compared with unexposed children

	Rate (deaths/100 PYO)	HR (95% CI)	p Value
Unexposed	3.48 (526/151)	1	
Proximity in the house			
Same family	5.94 (13/2.19)	2.15 (1.3 to 3.7)	0.28
Different family	4.43 (28/6.32)	1.51 (1.0 to 2.2)	
Relation to the TB case			
Mother	17.9 (2/0.11)	7.82 (2.1 to 30)	0.05
Other relative	4.01 (22/5.48)	1.42 (0.9 to 2.2)	
TB case is a guest	5.82 (17/2.92)	1.92 (1.2 to 3.1)	
Smear status of the TB	case		
Positive	5.35 (15/2.81)	1.90 (1.1 to 3.2)	0.54
Negative	4.56 (26/5.70)	1.55 (1.0 to 2.3)	
HIV status of the TB cas	se		
Positive	5.15 (16/3.12)	1.78 (1.1 to 2.9)	0.76
Negative	4.71 (25/5.31)	1.61 (1.1 to 2.4)	
Missing	0 (0/0.09)	_	
Survival status of the TI	B case		
Dead	4.44 (14/3.15)	1.58 (0.9 to 2.7)	0.79
Alive	5.06 (27/5.34)	1.72 (1.2 to 2.5)	
Missing	0 (0/0.02)	_	

PYO, person-years of observation.

## What can we do?

# Intensified Case Finding for Tuberculosis in Prevention of Mother-to-Child Transmission Programs: A Simple and Potentially Vital Addition for Maternal and Child Health

Andrea DeLuca, MHS,\* Richard E. Chaisson, MD,\* and Neil A. Martinson, MBBCh, MPH\*†

J Acquir Immune Defic Syndr • Volume 50, Number 2, February 1 2009

# Combining PMTCT With Active Case Finding for Tuberculosis

Paula B.N. Kali, MBBCh,\* Glenda E. Gray, MBBCh, FCPaeds (SA),\*
Avy Violari, MD, FCPeads (SA),\* Richard E. Chaisson, MD,†
James A. McIntyre, MBChB, FRCOG,\* and Neil A. Martinson, MBBCh, MPH\*†

We found a prevalence rate of active TB of 2.16% (216/100,000) in this population of HIV-infected pregnant women in Soweto. Pregnant women with TB had significantly lower CD4 cell counts than women without TB but were otherwise similar.

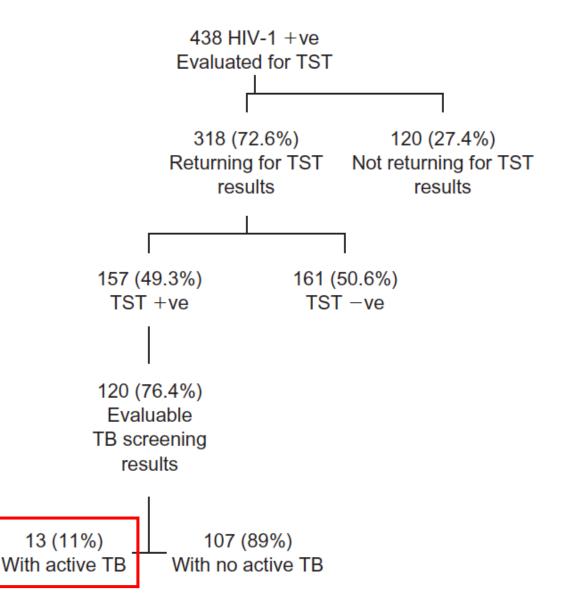

Fig. 1. Tuberculosis case-finding at Chris Hani Baragwanath Perinatal HIV Research Unit in Soweto, South Africa. TB, Tuberculosis; TST, tuberculin skin test.

Tuberculosis active case-finding in a mother-tochild HIV transmission prevention programme in Soweto, South Africa
