Multidrug-resistant tuberculosis:

What every patient should know

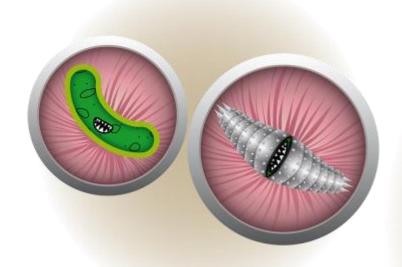

TB CARE II is funded by USAID under Cooperative Agreement Number AID-OAA-A-10-00021. The project team includes prime recipient, University Research Co., LLC (URC), and sub-recipient organizations Jhpiego, Partners In Health, Project HOPE along with the Canadian Lung Association; Clinical and Laboratory Standards Institute; Dartmouth Medical School: The Section of Infectious Disease and International Health; Euro Health Group; and The New Jersey Medical School Global Tuberculosis Institute.

the views of USAID or the United States Government.

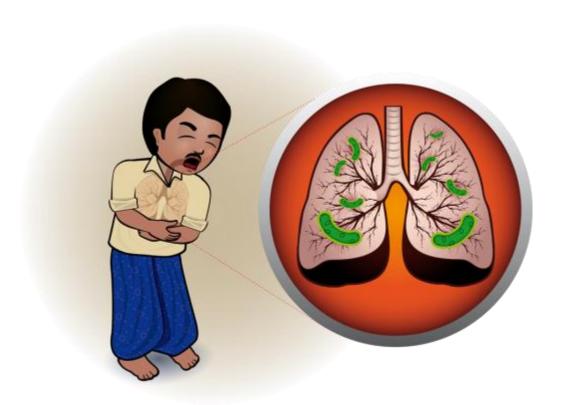

Multidrug-resistant tuberculosis

Resistant, but curable!

What is tuberculosis (TB)?

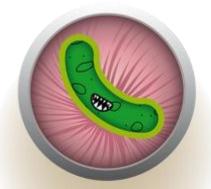

TB is a disease that primarily affects the lungs

It is dangerous if you do not receive treatment!

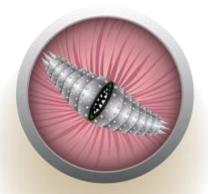

What is multidrug-resistant TB?

It is the same microbe that causes drug-susceptible TB. But it is more DANGEROUS because some medications cannot cure it.

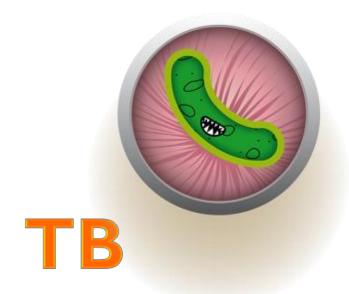

MDR-TB

It is difficult to combat.

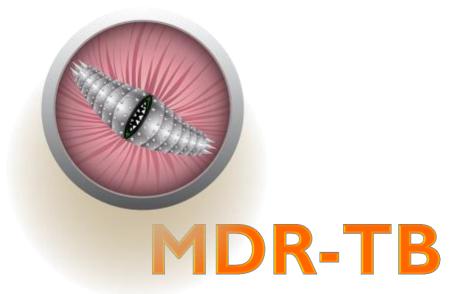

But if you take all your medications, you can succeed!

What is the difference between TB and MDR-TB?

The treatment:

- Is 6 months
- Requires 4 medications
- Usually causes no side-effects

The treatment:

- Is 18-24 months
- Requires many medications
- Can cause many side-effects

IT IS MORE SERIOUS!

How do you contract MDR-TB?

You can contract MDR-TB through the air when someone...

- Coughs
- Sneezes

JUST LIKETB!

What are ways you cannot contract MDR-TB?

NOT

by shaking someone's hand

NOT

by dirty or sweaty cloths or sheets

NOT

by sharing utensils to eat food

JUST LIKETB!

What are the symptoms of MDR-TB?

Coughing

Night Sweats

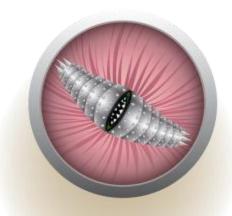

Fatigue

How do you get MDR-TB?

Directly from another person who has MDR-TB

Or when TB becomes resistant:

- Unfinished or irregular treatment for TB
- Taking anti-TB drugs of inferior quality

What is the treatment for MDR-TB?

Many medications, including an injectable

The treatment lasts 18-24 months, and...

It MUST always be supervised!

What is a supervised visit?

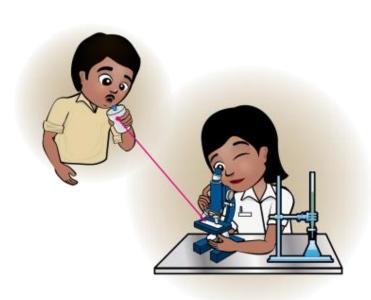

Trust your DOT
Provider, she is there to
assist you!

A supervised visit is one where a DOT Provider will help you take your medications daily

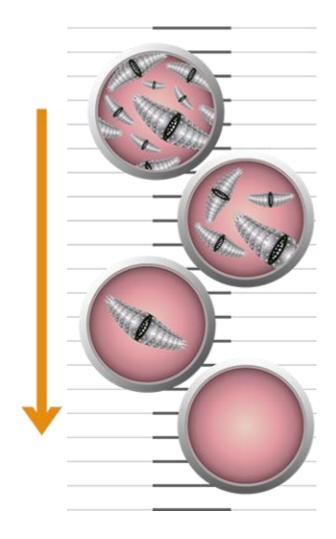

How do you know if treatment is working?

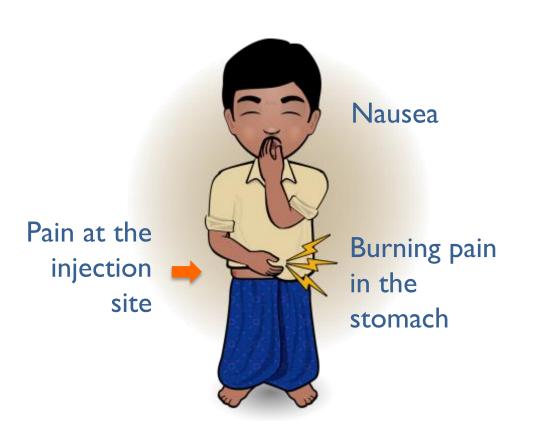

You will need to give a sputum sample every month for testing

You will continue to provide these samples throughout treatment

Does the treatment have side effects?

Talk to your DOT Provider about any **side effects.** Tell them how often and severe they are.

What are dangerous side effects?

Some side effects might require immediate medical attention from a doctor at the clinic. These side effects include:

Hearing Loss

Ringing in the ears and dizziness

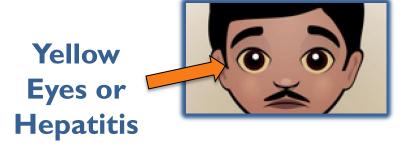

Severe cramping in the legs

What are dangerous side effects?

What happens if you do not take your treatment?

You could infect your loved ones

The microbe can become more resistant to medications

You could die

How do you take care of yourself when you have MDR-TB?

Good eating habits are needed to get better

Eliminate drugs, alcohol, and smoking from your activities

Give your body energy to help it "fight" MDR-TB

How do you keep MDR-TB from spreading?

Not forgetting to take your medication

Opening all windows to improve ventilation

Covering your mouth when you sneeze or cough

Spitting into paper towels and discarding immediately

How can I prevent MDR-TB from spreading at home?

Children under 5
years should
spend as little
time as possible
around MDR-TB
infected persons

Socializing outside the house, when possible

MDR-TB infected persons should sleep in their own bed in a well ventilated area, away from other family members

How can I protect my family, friends, and community?

The best protection against MDR-TB is to:

- ✓ Prevent infection
- ✓ Get diagnosed early
- ✓ Complete TB treatment

We are all in this together!

You are NOT alone!!
